

TAKING ROOT IN AMERICAN SOIL!

Bringing Japanese Healthcare Excellence to the United States

Japan is renowned for its unparalleled healthcare excellence, consistently achieving remarkable patient outcomes. Inspired by this tradition, we are excited to bring our legacy to the United States. Our new facility in North Carolina marks the beginning of this journey, and we are dedicated to elevating healthcare standards with our premium dialysis solutions and advanced cardiovascular care.

Blossoming Together

Symbolism of Cherry Blossom and Dogwood Flower

As we lay the foundation stone of our new North Carolina facility, we're invigorated by the dynamic essence of cherry and dogwood blossoms – both emblems of rebirth and tenacity. We're laying down more than mere foundations today; we're nurturing seeds of ingenuity for abundance in the United States.

In Japan, the cherry blossom is a symbol of new beginnings and a future that is positive, promising, and bright. On the other hand, the dogwood blossom, North Carolina's state flower which traces its roots back to Japan, speaks of endurance, strength, and the capacity to overcome life's varied challenges.

Both blossoms are rooted in Japanese tradition. Just as these trees grow and flourish, we aim to cultivate growth and resilience within our company and community.

Rooted in American Craftsmanship, Blossoming with Promise!

So, what brings us to the US and to North Carolina?

It is the pressing healthcare needs of our community and our passion to meet these needs head-on.

- **Dialysis Treatment**: Did you know that over 500,000 people in the US require regular dialysis treatments to manage kidney failure? We are here to make a difference by producing high-quality medical devices locally, ensuring that the products essential to these life-saving treatments are always within reach.
- **Diabetes and Obesity**: Millions of individuals manage diabetes with insulin, and specialized devices are a crucial part of their daily routine. By manufacturing devices for insulin and GLP-1 therapies right here in the US. We are committed to improving the lives of those affected by diabetes and obesity.

We are inspired by these challenges and motivated by the opportunity to contribute to the wellbeing of numerous individuals. By bringing our production closer to American homes, we not only ensure timely access to essential healthcare products but also support the local economy and reduce the environmental impact.

About Nipro

Founded in 1954, Nipro is a Japanese medical equipment manufacturing company committed to excellence. Our vision transcends the present, focusing on creating a healthier tomorrow for future generations. We believe in providing the finest healthcare to everyone, everywhere, ensuring that people can live both longer and better lives.

From Japan to the World

Our vision is global, yet deeply rooted in our heritage. As we expand from Japan to the world, our new facility in North Carolina represents a significant milestone. We are dedicated to improving lives, and bringing world-class healthcare solutions closer to home. We look forward to a flourishing future in our new American abode and to enabling even more patients in the United States to live longer, live better!
